Question – EMI Calculator

Code –

```
def calculate_emi(principal, annual_rate, tenure_years):  
    monthly_rate = annual_rate / (12 * 100)  
    tenure_months = tenure_years * 12  
    emi = (principal * monthly_rate * (1 + monthly_rate) ** tenure_months) /  
    ((1 + monthly_rate) ** tenure_months - 1)  
    return emi  
  
principal_amount = 500000  
annual_interest_rate = 7.5  
loan_tenure_years = 20  
  
emi_amount = calculate_emi(principal_amount, annual_interest_rate,  
loan_tenure_years)  
  
print(f"EMI Amount: {emi_amount:.2f}")
```

```
def calculate_emi(principal, annual_rate, tenure_years):  
    monthly_rate = annual_rate / (12 * 100)  
    tenure_months = tenure_years * 12  
    emi = (principal * monthly_rate * (1 + monthly_rate) ** tenure_months) / ((1 +  
    monthly_rate) ** tenure_months - 1)  
    return emi  
principal_amount = 500000  
annual_interest_rate = 7.5  
loan_tenure_years = 20  
emi_amount = calculate_emi(principal_amount, annual_interest_rate, loan_tenure_years)  
print(f"EMI Amount: {emi_amount:.2f}")
```

Output –

EMI Amount: 4027.97

• EMI Amount: 4027.97
