Assignment code 2 (day 2)

Question – Smart Temperature Advisor

Code –

```
temperature = int(input("Enter the temperature in Celsius: "))
if temperature < 0:
    print("Freezing! Stay indoors and wear heavy clothing.")
elif 0 <= temperature < 15:
    print("Cold. A jacket is recommended.")
elif 16 <= temperature < 25:
    print("Pleasant weather. Great for outdoor activities.")
elif 26 <= temperature < 35:
    print("Hot. Stay hydrated and use sunscreen.")
else:
    print("Extreme heat! Avoid going outside.")
```

```

temperature = int(input("Enter the temperature in Celsius: "))
if temperature < 0:
    print("Freezing! Stay indoors and wear heavy clothing.")
elif 0 <= temperature < 15:
    print("Cold. A jacket is recommended.")
elif 16 <= temperature < 25:
    print("Pleasant weather. Great for outdoor activities.")
elif 26 <= temperature < 35:
    print("Hot. Stay hydrated and use sunscreen.")
else:
    print("Extreme heat! Avoid going outside.")

```

Output –

```

Enter the temperature in Celsius: 40
Extreme heat! Avoid going outside.

```

```

Enter the temperature in Celsius: -10
Freezing! Stay indoors and wear heavy clothing.

```

```

Enter the temperature in Celsius: 10
Cold. A jacket is recommended.

```
